SUMMARY

Security+ certified cybersecurity professional and software engineer with 4+ years across security and software engineering. I bring detection, network-security, and development experience to practical security automation.

EXPERIENCE

Software Engineer | Work4Flow | June 2026 - Present

- Develop incident-to-knowledge generation and AI-assisted relevance evaluation workflows using JavaScript and APIs.

- Build workspace components, manage asynchronous workflow responses, and improve loading, navigation, and error handling.

- Debug application access and configuration issues; develop frontend experiences using Next.js and CSS.

Security Analyst | Relevance Labs | September 2025 - December 2025

Fine-tuned Wazuh SIEM rules mapped to MITRE ATT&CK, reducing false positives by approximately 35%. Led alert triage, log analysis, threat investigation, containment, and remediation. Identified exposed attack surfaces and security misconfigurations and analyzed phishing and malicious attachments.

Software Engineer - Network Security | Hewlett Packard Enterprise | January 2022 - July 2024

Worked on SD-WAN, firewalls, VPN, RADIUS-based IAM, network monitoring, and security automation. Used Wireshark and Suricata for network analysis and Python, C, and Lua for automation. Performed basic malware and suspicious-script analysis using PowerShell and Bash. Git/GitHub served as the primary codebase and collaboration workflow.

Privileged Access Management Intern | EOX Vantage | June 2021 - December 2021

Built an AWS-based PAM solution to monitor and restrict privileged-account access, performed access reviews, identified over-privileged accounts, and applied least-privilege principles.

TECHNICAL SKILLS

Detection & SOC: Wazuh, Splunk, SIEM, MITRE ATT&CK, alert triage, threat hunting, incident response, EDR/XDR concepts

Network Security: Suricata, Wireshark, NetFlow, TCP/IP, VPN, firewalls, SD-WAN, IDS/IPS, packet and log analysis

Automation & Development: Python, PowerShell, Bash, JavaScript, C, C++, Lua, Java, REST APIs, Git, GitHub

IAM & Access: Active Directory, LDAP, Okta, RADIUS, SSO, RBAC, PAM, access reviews, least privilege

Cloud & Infrastructure: AWS EC2/S3/IAM, Docker, Kubernetes, Linux, Windows, VirtualBox

Security Testing: Nmap, Burp Suite, Metasploit, OWASP Top 10, vulnerability assessment, SAST/DAST concepts

EDUCATION & CERTIFICATION

M.S. Cybersecurity | University of North Carolina at Charlotte | August 2024 - December 2025

B.Tech Computer Science & Engineering | PES University | August 2018 - May 2022

CompTIA Security+

PUBLICATION

Password Age: A Neglected Aspect of Security | IEEE I2CT
